**Explain the difference between FLOAT, DOUBLE and REAL?**

➤ FLOATs store floating point numbers with 8 place accuracy and take up 4 bytes. DOUBLEs store floating point numbers with 16 place accuracy and take up 8 bytes. REAL is a synonym of FLOAT for now.

Example: Can you find h?

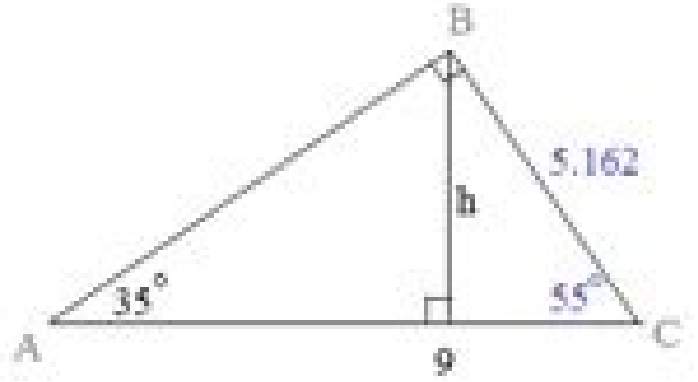

**Method 1:**

Since ABC is a right triangle, we can find BC using sine function.

$$\sin(35^\circ) = \frac{BC}{9}$$

$$BC = 5.162$$

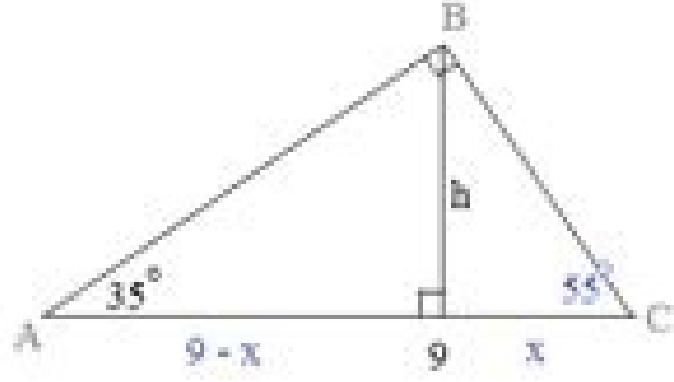

Then, we can use sine function to find h in the small right triangle:

$$\sin(55^\circ) = \frac{h}{5.162}$$

$$h = 4.23$$

**Method 2:**

Label the parts of the triangle(s). Then, construct 2 equations containing h:

$$\tan(35^\circ) = \frac{h}{(9-x)}$$

$$\tan(55^\circ) = \frac{h}{x}$$

$$h = (9-x)(\tan 35)$$

$$h = x(\tan 55)$$

using substitution,

$$(9-x)(\tan 35) = x(\tan 55)$$

$$.70(9-x) = 1.428x$$

$$6.3 = 2.128x$$

$$x = 2.96$$

$$\text{Finally, } \tan(55^\circ) = \frac{h}{2.96}$$

$$h = 4.23$$

Name \_\_\_\_\_ Date \_\_\_\_\_

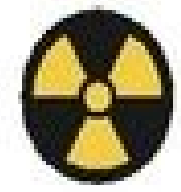

Instructions: Choose the correct word to fill in each blank in the paragraphs below to reinforce your knowledge of energy. Each word box below is for the paragraph above it.

Energy is defined as the ability to do \_\_\_\_\_. Work is defined as when a force is used to move an object a \_\_\_\_\_. When thinking about energy and work, keep in mind that energy can be \_\_\_\_\_ in situations where no work is done. Also, the object upon which the work is done can be any \_\_\_\_\_, large or small. Inside of our cells, \_\_\_\_\_ organelles perform a great deal of work moving many molecules in, out, and \_\_\_\_\_ the inside of the cell. Energy is constantly being changed or \_\_\_\_\_ from one type of energy to another; there are many different \_\_\_\_\_ of energy.

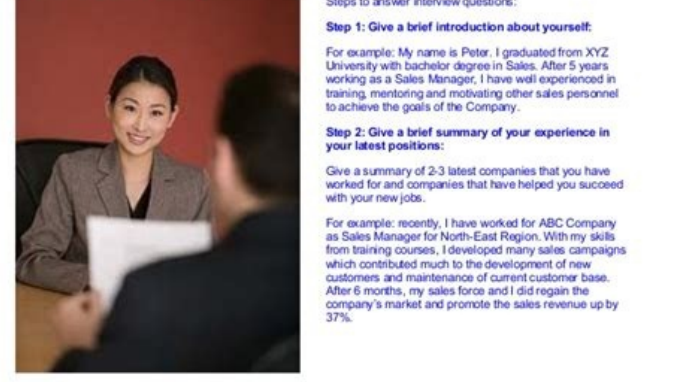

size around transformed distance work microscopic used forms

There are two main \_\_\_\_\_ of energy. Stored energy is called \_\_\_\_\_ energy. Energy being used to move an object is called \_\_\_\_\_ energy. The most common forms of potential energy are \_\_\_\_\_ potential energy, gravitational potential energy, nuclear potential energy, and \_\_\_\_\_ potential energy. Chemical potential energy is stored in the \_\_\_\_\_ of chemical compounds. Gravitational potential energy is due to an object having the potential to \_\_\_\_\_ from a height or \_\_\_\_\_ down a hill. Nuclear potential energy is stored in the bonds inside of the nucleus of an \_\_\_\_\_. Elastic potential energy is stored in an object that has been stretched and has the potential to return to its original \_\_\_\_\_.

potential bonds form atom cell  
chemical rail types elastic kinetic
